

Modular Gabion Systems

Project

Location:

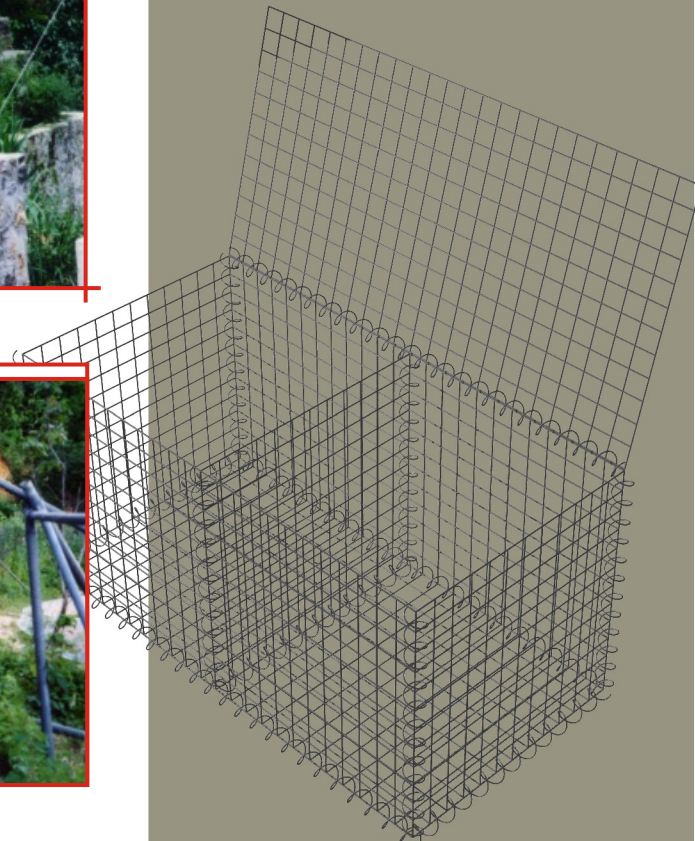

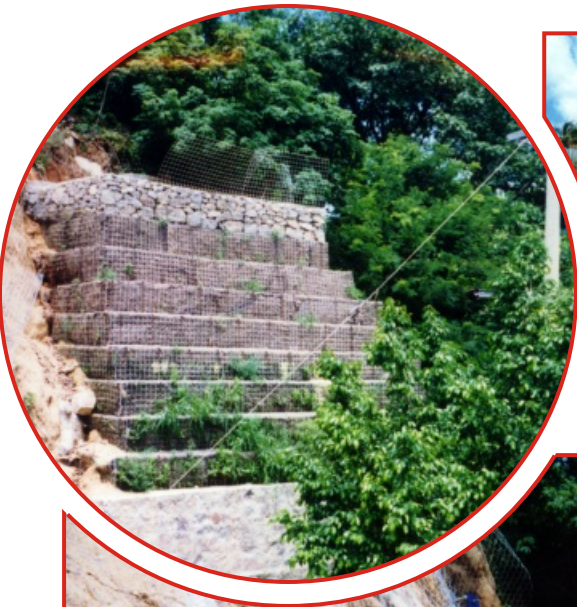

Acapulco City Water Treatment Plant
Acapulco, Mexico

Specifier:

Comisión Nacional del Agua

In this Acapulco project, Modular Gabion Systems is working double-duty in both gravity wall structures and rock fall netting. Modular Gabion Systems welded wire offers protection from falling rock and debris on this steep face. The wire mesh, supplied in roll stock, is unfurled down the slope and secured with heavy anchor bolts.

Nearby, gabions are installed in multi-tiered gravity retaining walls to support the slope. The porous nature of gabions not only offers hydrostatic relief, it also promotes revegetation as is clearly evident in these photos.
